

CASE STUDY: HARBOUR TOWN UPGRADES TO E-DS SCREENS

AUSTRALIAN BOLLARDS 2018

Harbour Town Upgrades to E-DS Screens

NJM Group was founded in 1992 with six employees operating out of a 32m² facility providing services to universities and manufacturers in Victoria and Tasmania.

Today, the company has expanded to service the mining industry, railway stations, local councils, shopping centres and many more industries Australia wide. We manufacture and distribute products from our 1,700m² warehouse and factory in Heidelberg West. Our range of products include:

- Bollards
- Handrails
- Bike racks
- Speed humps
- Wheel stops
- Variable rate boards
- Steel staircases and structural steel beams.

We also provide engineering services for steel fabrications, general steel repairs and deliver building and office maintenance and renovations.

We Stock. We Supply. We Deliver. We Site Install. We Maintain. Australia Wide.

Australian Bollards is proud to announce the installation of our new range of Electronic Display Solutions (EDS) at Harbour Town in Docklands. The site is managed by Secure Parking, who provides undercover parking with multiple auto-pay options with no pre-booking required. Harbour Town is located just a short walk from trams 70, 86 and the City Circle, providing patrons access to free transport in and around Melbourne's CBD after they have secured their vehicles in a Secure Parking spot.

E-DS screens by Australian Bollards have built-in PCs, which means they can display and process anything a computer can. They can be updated in real-time to display videos, available spaces and rates, hours of business, the temperature, news and advertising and can be integrated to any parking system. These high definition screens have access to cloud storage facilities to allow designs, templates, information and visuals to be controlled remotely, with the click of a mouse. Electronic Display Screens by Australian Bollards also feature built-in security cameras for security monitoring and to facilitate number plate recognition (NPR).

E-DS Screens

Our previous installations include Toowong Village Shopping Centre, Crown Casino, Torquay Village Shopping Centre, Etihad Stadium, Melbourne Sports and Aquatic Centre and Cosmo Shopping Centre on Chapel Street.

With over 25 years' experience, Australian Bollards engineers and provides innovative solutions like E-DS screens Australia-wide. We ensure our customers get quality and reliable turnkey solutions by supplying and installing and investing in state of the art technology to optimise our customers' experiences.
