

CASE STUDY: UPGRADING VICTORIA'S FUTURE

AUSTRALIAN BOLLARDS 2018 UPGRADING VICTORIA'S FUTURE

NJM Group was founded in 1992 with six employees operating out of a 32m² facility providing services to universities and manufacturers in Victoria and Tasmania.

Today, the company has expanded to service the mining industry, railway stations, local councils, shopping centers and many more industries Australia wide. We manufacture and distribute products from our 1,700m² warehouse and factory in Heidelberg West. Our range of products include:

Bollards

Handrails

Bike racks

Speed humps

Wheel stops

Variable rate boards

Steel staircases and structural steel beams.

We also provide engineering services for steel fabrications, general steel repairs and deliver building and office maintenance and renovations.

We Stock. We Supply. We Deliver. We Site Install. We Maintain. Australia Wide.

Hoping to use it as a push to win next month's election, Victorian state opposition has unveiled their planned 10-year rail upgrade. The \$19 billion plan will feature 200km/h trains, much like those found in Europe. The aim is to reduce trip times throughout Victoria's regional areas - a Geelong to Melbourne trip would take only 32 minutes after the upgrades. The focus will initially be on the areas of most congestion – Geelong and Ballarat – and will aim to relieve pressure from Melbourne's current unsustainable growth.

Victoria's Future

This plan comes just after another proposition to connect Melbourne's regional areas via direct train lines. Both plans have their merits, and either way will result in much needed improvements to the current system. NJM Group has already been contributing to the current system via upgrades at Hawkstowe Station. NJM Group works tirelessly to manufacture and supply a variety of products designed to make our community safer. This includes:

Handrails

Bollards

Rails

Fences/Barriers

Bike Racks

Electronic Message Displays

Street Furniture
